

The Cleanupdate

September 2009

Centralized Approval and Compliance Department proves beneficial to Clean Earth Customers.

Clean Earth decided twelve months ago to centralize its approval and compliance department in order to provide customers with expedited reviews and streamlined approvals for their prospective projects. By centralizing the soil reviews, Clean Earth is able to look across all six of its facilities and numerous beneficial reuse sites to determine the most cost effective solution.

Clean Earth's one-stop shop for reviews and approvals means faster turnarounds. More importantly, Clean Earth, with its broad range of options, can save its customers money by offering multiple facilities to move more material – cost effectively and faster.

With its industry leading knowledge of environmental regulations and experience with governing agencies, the centralized review and approval department keeps customers in compliance. Additionally, Clean Earth's tracking and reporting capabilities help our customers meet their regulatory requirements and the needs of their respective customers. Numerous customers tell us that they take great comfort in our demonstrated commitment to managing contaminated materials in an environmentally sound manner that is in conformance with our permits and environmental regulations.

LSRP Conference Generating Interest and Registrations

New Jersey's Licensed Site Remediation Professional Act will be enacted November 1st - less than 60 days from now. In light of this momentous change to the soil treatment and recycling industry, Clean Earth is pleased to partner with The Chemistry Council of New Jersey to develop the first LSRP Conference on October 7, 2009.

We strongly encourage you to register today. Since the LSRP Registration email a few of days ago, we have already received a large number of registrations. Along with the conference, Clean Earth will be giving a tour of its state of the art solid and hazardous waste treatment, storage and disposal facility located in Kearney, NJ. The LSRP conference has limited seating. Registration for the tour will be on a first come basis so make your reservation today.

Just click on this link to download the registration form.

What You Don't Know about Clean Earth and Barclays Golf Tournament 2009

Liberty National Golf Course played an integral role in the Barclay's Golf Tournament with Heath Slocum taking home the first trophy in this year's FedExCup Playoffs.

Clean Earth played an equally important role in making Liberty National one of the premier new golf courses in America. Only the industry leader, Clean Earth, could take on the job of delivering almost 1,000,000 tons of fill material to Liberty National. Clean Earth takes great pride in its role in molding this former brownfield site into a golf course with breath-taking views of the Manhattan Skyline, The Statue of Liberty and a one-mile long waterfront.

To learn more about the job of building Liberty National click on the link below:
